GRUPO ___

TAREA 1

A shop requests an application to manage their products and their clients. They have three types of products: clothes, shoes and bags. All products have an identifier, a name, a color, a description, a price and a category. In some seasons, products may have a discount. The clothes and shoes have a size, and the shoes can be of different heights. The shop wants to visualize all this information about their products, and also, a photo and the number of units.

The shop has the name, address and telephone numer of its clients. Each client has an identifier. Clients can place orders. The shop wants to be able to register the orders of each client in the application, in order to see the date on which the order will be made, its identifier and the products it contains.
